November 10, 1981

Ms. Ruth G. Griffith
P. O. Box 122
Indian Orchard, Ma 01151

Dear Ms. Griffith:

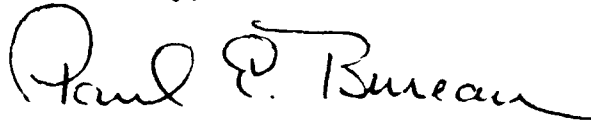

Enclosed is a response to your latest request received October 26, 1981, for additional information regarding your records. This reply includes your work history, exposure monitoring summary of the East and Saflex Control Labs, available material safety data sheets, and a listing of materials developed in the mid-70's.

You may have noted that all of the raw materials items used and products produced in our manufacturing operations in the distant past are not on the list; e.g., ~~Vinyl Chloride Monomer~~ and ~~Polyvinyl Chloride Sheet and Compound~~. The reason for this is that these items were not present in the lab at the time this type of recordkeeping originated. Requirements for this type of extensive recordkeeping did not begin until August of 1980. Therefore, this listing is a duplicate of the information previously sent you and represents the best available inventoried information.

Please note that this is the best recorded information of material in the lab available. There is no record of what you personally dealt with, therefor, it is not meant to be construed that you were or are subjected to all these materials in your job function. If you have any questions, please contact me.

Finally, I would hope that your poor health, as mentioned in your letter, is improving.

Sincerely,

Paul E. Bureau, Personnel Manager
