THE ELIMINATION OF ASBESTOS
FROM MOBIL PRODUCTS
Files: 61.00/ 17.10

Attached is a copy of our Blending Plant Distribution letter of January 16, 1978 dealing with the elimination of asbestos, which we could only just retrieve from the Record Center. As you will note C.E. Labr's letter of December 12, 1977 was circulated to all MRDI Marketing Managers.

BLENDING PLANT DISTRIBUTION

THE ELIMINATION OF ASBESTOS
FROM MOBIL PRODUCTS
FILES: 61.00; 17.10

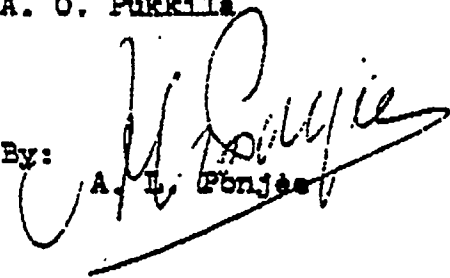

Dear Sir:

The attached letter of December 12, 1977, which was circulated by ID-Marketing Department to all ID-Affiliate Marketing Managers, is self-explanatory.

A new substitute for asbestos has been identified, namely, a bagasse-derived fiber that has been defibrillated, depitted, chopped, clarified and chemically treated. Several U. S. manufacturers have this material under evaluation. In case you are interested in this type of material, please let us know.

Very truly yours,

A. O. Pukkila

MARKETING MANAGERS

THE ELIMINATION OF ASBESTOS
FROM MOBIL PRODUCTS
File: 61.00

Dear Sirs:

Asbestos fibers have been classified as a serious respiratory hazard and asbestos is recognized as a chronic health hazard for humans. Accordingly, upon advice from the Corporate Medical Department, we recommend that all products containing asbestos be withdrawn from the market or be replaced by suitable asbestos-free products.

We understand that asbestos is present in some products which are purchased from outside sources, and you are requested to provide ID Technical Service Department with all available information on these. Specifically, they would wish to be advised of the steps you propose to take to supply asbestos-free products. Suitable substitutes for asbestos are given in the attachment.

We would appreciate a reply before January 31, 1978.

Very truly yours,

C. E. Lehr
