TO

Dr. E. S. Tucker

South Second

As per our phone conversation today, I am sending two special samples from Snow Creek. These samples are labeled as follows:

1. Snow Creek 1 block below plant - November 6, 1969
2. Snow Creek and Choccolocco Creek confluence - November 6, 1969

These samples were taken after a line failure which caused a spill in the Aroclor department and should reflect the P.C.B. level in the creek under the most severe conditions.

These samples should provide us with some very valuable background data. I would appreciate hearing from you on these samples at your earliest convenience.
