

1 Q Is there anything else, Doctor, which forms
2 this particularly shaped structure inside the lungs
3 when you look at it?

4 A Yes, you can get -- this brownish protein is
5 a nonspecific reaction and it can be laid down around
6 other things, but we are very fortunate here, we don't
7 even have to guess.

8 We can see the clear crystal rod coming out
9 into this and we know this is an asbestos fiber.

10 Q This is what you are referring to, Dr.
11 Roggli has said you have to normally look at 100
12 different sections in order to find in a person with
13 no history of occupational exposure?

14 A That is correct.

15 Q It was found by looking at six in Mr. Wood?

16 A No, in terms of what Mr. Roggli was
17 speaking of, it was found in just looking at one.

18 Remember, I was just looking at the little
19 circles on six slides which, if you may, made half, if
20 you will, of Roggli's slide.

21 Q What is the magnification?
