Prepared in Anticipation of Litigation

Debbie,

Please see the attached sheet for the revisions and additional data I provided in phone conversations to Jesse Hanshaw.

The revised fields are shaded yellow. The green shaded fields are my estimates of allowable hourly C-8 rates from the Granular dryers which were not calculated before. The orange shaded cell identifies the vent for which the calculations refer to C-8 as a vapor. Note that the application for 1823A, vent point T7IME or 662, also refers to C-8 as a vapor.

Call me with any questions.

Chris Shoop
