

Shell Oil Company • Shell Chemical Company
Interoffice Memorandum

FEBRUARY 26, 1982

FROM: S. A. WEAVER AND G. N. MATELLI
TO: R. V. MATTERN
SUBJECT: NESHAPS INSPECTION - ASBESTOS,

ASBESTOS - FEBRUARY 1 & 3, 1982

The inspector visited CA Unit, the waste asbestos storage area, and landfills 101 and 103. He seemed interested in the asbestos slurry going on-site to 101 and 103, and he photographed site 103. The inspector noted and photographed one bag in the waste asbestos bin which did not have a code tag from CA or an "asbestos-hazard" label. Another bag in the same bin was photographed which was not closed.

We may receive some reprimand for the open bag and the non-labeled bag of waste asbestos.

NESHAPS INSPECTION - PCB'S,
MERCURY, ASBESTOS, AND VCM

4

In summary, Stankis made a very thorough inspection of our VCM Unit and Site III and did find deficiencies, but not of a major violation.
