

U.S. IMPROVED Hunting Cartridges

An advanced type of ammunition for both the older and newer models of big game rifles. The line includes 25-20, 25-35, 30-30, 32 Winchester; 30 Govt. '06, 30-40 Krag, 6.5 mm. Mannlicher, 32 Winchester Special, 303 Savage, 25, 30, 32, 35 Remington Auto, 7.62 Russian, 303 British.

They give speed with weight behind it. Noted for their deadly shocking force and ability to kill cleanly at long range. Non-corrosive priming mixture.

Coppered .22 RIM FIRES

These rim fires with copper-coated bullets are ideal for all general .22 shooting. They are attractive in appearance, clean to handle and accurate in shooting qualities. They come in short, long and long rifle sizes. Primed, of course, with the self-cleaning type of non-corrosive priming mixture.

.22 N. R. A. Long Rifle Cartridges

The next time you want to make an exceptionally fine target score or are going out for small game, take along some U. S. .22 N. R. A.'s. They're record breakers—extremely accurate at all small-bore distances and designed not only for rifle shooting but for indoor and outdoor pistol and revolver shooting. They're game getters—unusually effective on all small game up to and including woodchucks. For target work, use the N. R. A. with solid bullet; for small game, the N. R. A. with hollow-point bullet.
