The Manager,
Australian Blue Asbestos Ltd.,
WITTENOOM. W.A.

Dear Sir,

In a few weeks time, a Mr. Major of the Commonwealth Department of Health, Sydney, will be coming to W.A. and will be visiting Wittenoom to carry out a dust survey of your Mine and Mill. I will be accompanying Mr. Major during this visit.

In a recent letter from Dr. Gordon C. Smith, the Principal Medical Officer of that Department, the following information was desired.

(a) Is there a Chemical and Analytical Balance available at Wittenoom which Mr. Major may use for approximately 10 minutes per day. The sensitivity of the balance would need to be of at least 0.2 mg.

(b) The possibility of a microscope with oil immersion objective. - This is not essential.

(c) The available power supply at Wittenoom.

(d) A request for a flow diagram of both the Mine and Mill with the number of men exposed to dust in the various stages of the flow sheet.

If you could supply the above information to me as soon as convenient it would be most appreciated.

Yours faithfully,

DISTRICT INSPECTOR OF MINES.
