FE

Subject: Toxicity of Aroclor polychlorinated biphenyls

Present for Bayer:
- Dr. Ernst Knust - Technical Mgr. Electrical Products
- Dr. Erlicher - Medical Dept. Mgr.
- Dr. Frezer - Pesticide Residues Research
- Dr. J. George - Plant Mgr.
- Mr. E.Martin - Commercial Dept.

Bayer manufacture approximately 5,500 tons per annum of PCB's broken down as follows:

Electrical uses	4,500 tons
Paint & lacquers over	1100 tons
Misc. uses	very little

PCB's are not sold for use in lubricants for physiological reasons. They reasoned that bearings get hot and that oil vapours containing PCB's would be a hazard.

./.

ACTION REQUIRED

Monsanto

They listened to all that we were planning to do and since the meeting contained representatives of only the electrical people, who are concerned mainly with closed systems, there wasn't any great anxiety about this matter. However, their medical man said that they will make a statistical study of the health of the workers at their Aroclor plant to compare those in heavy exposure with those in light exposure and also with workers on other plants.

They might also be prepared to do some work on fish and animals.

ACTION

JNH arranged for samples of Bayer materials to be sent to R.E. Keller, St. Louis

EPW It was agreed that Dr. Knust would be our contact for communication purposes.
