TO: Mr. R. L. McCallister

LOCATION: Portland, Oregon

FROM: L. K. Ryder

LOCATION: Stamford, Connecticut

SUBJECT: Akron, New York Gypsum Division Plant
Pulmonary Functional/Chest X-Ray/
Blood-Gas Examination Reports

PLAINTIFF'S EXHIBIT

GP-2179

Submitted herewith you will find photocopies of the recently completed examination and evaluation reports from Marvin L Amdur, M.D. of the Buffalo Industrial Medical Center for twenty-one (21) employees of the Akron, New York Gypsum Division Plant.

I have reviewed the reports submitted by Dr. Amdur and have either checked and/or underlined in red the information I consider pertinent.

Examination reports indicate that one employee, Francis McCarger, has significant pulmonary fibrosis, five employees have mild to moderate ventilatory impairment or emphysema indications, one employee has a history of asthma without evidence of disability, one employee with a history of chonic bronchitis with minimal increase in bronchovascular markings possibly due to obesity and the remaining thirteen employees with normal findings.

It is noted that under date of 10/30 Jim Hurd requested Jack Rauch to completely investigate the work history of Mr. McCarger which appears to be entirely appropriate.

May I suggest that you review the entire set of twenty-one examination reports with Mr. Hurd and advise this writer as to the appropriate course of action we should now take.

Thank you for your assistance and guidance.
