(26)

Gentlemen:

For the past five years, the National Institute for Occupational Safety and Health (NIOSH) has been conducting the National Occupational Hazard Survey, pursuant to Sections 8, 20(a) and 20(b), of the Occupational Safety and Health Act of 1970. By visiting approximately 5,000 companies throughout the United States, our engineers have inventoried the basic substances used by American workers. Much of this information has been recorded by brand name, however, and needs to be clarified in terms of chemical ingredients.

To effect this clarification, we are requesting, under authority of the Sections of the Act cited above that you identify the chemicals present in amounts of one percent or greater (by weight or volume) and their approximate concentrations (i.e. within +/- 5 percent) in your products that were recorded during the Survey. The particular products in which we have an interest are specified on the enclosed request forms. Please supply this information according to the instructions on the back of each form and return the forms to us in the enclosed self-addressed envelope. Non-specific names or general chemical families will be insufficient when more specific information is available. Though you may no longer manufacture a specified product, we still require the ingredient information since the product was being used at the time of the Survey. Forms for products which you merely distribute, and for which you have no ingredient information; should be returned with the correct manufacturer's name and address.

On January 5, 1977, the United States District Court for the Eastern District of Pennsylvania, in the case of United States of America versus McGee Industries, (Misc. No. 76-155) held that NIOSH has the right under Section 8(b) of the Occupational Safety and Health Act of 1970 to compel the production of evidence relevant to a lawful, authorized activity - the conduct of its research investigations. The Court further directed McGee Industries to comply with the subpoena issued by NIOSH calling for information on the ingredients of trade-name products identified during the National Occupational Hazard Survey. The case has been appealed by the company, and the District Court opinion is expected to be affirmed.
