

April 2, 1970

Dr. David B. Peakall
Senior Research Associate
Section of Ecology & Systematics
Division of Biological Sciences
Cornell University
Ithaca, New York 14850

Dear Dr. Peakall:

I just read your recent article in the April, 1970 issue of Scientific American and was reminded of your request for a xerox copy of Monsanto Technical Bulletin 306.

I apologize for the delay, but I attempted to get a copy of either the old or the revised bulletin. All old copies have been given to the many individuals who made requests. A revised version has been delayed indefinitely until more information about PCB's regarding degradability, toxicity, etc. is obtained.

I am enclosing a copy of Monsanto Technical Bulletin O-FB/1. Since it contains much of the basic data which was in Bulletin 306, I thought you might find it useful.

Concerning your question of the production figures for these compounds, I believe you'll understand that since the uses of these compounds represent a highly competitive situation I am not able to forward the production information.

Sincerely,

W. B. Papageorge
Manager
Environmental Control
