Re: PFOA/C-8 Blood Levels From Ohio/West Virginia Drinking Water
Contamination: For Ar-226/OPPT-2003-0012/TSCA 8(e)/IRIS

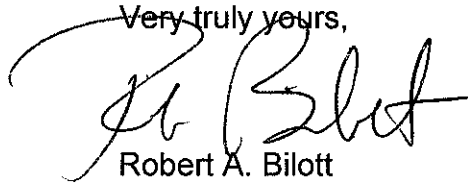

Ladies and Gentlemen:

Enclosed is information relating to the levels of PFOA/C-8 detected in the blood of tens of thousands of people who used for at least one year drinking water from one or more public and/or private drinking water supplies in West Virginia and/or Ohio contaminated with PFOA/C-8 at or above 0.05 parts per billion. This information was collected through the Health Project implemented under a 2005 settlement of a class action lawsuit against E.I. du Pont de Nemours and Company. Additional information relating to this data and health effects reported among those tested (and other information) can be found at the following Web site hosted by West Virginia University: <http://www.hsc.wvu.edu/som/cmed/c8/>. We understand that additional data will be posted on this Web site in the future.

Page 2

We request that USEPA include this information in its AR-226, OPPT-2003-0012, TSCA 8(e), and IRIS docket and databases for PFOA/C-8, except any portion that EPA is prohibited by law from including in its public files.

Very truly yours,

A handwritten signature in black ink, appearing to read "R. Bilott", is written over the typed name "Robert A. Bilott".
