C. E. Fisher - Montreal

Division of Labor

Dr. Verne's office has just told me that the manuscript copy of the paper entitled "Experimental Studies of Asbestosis" was submitted on August 11 to the Editor of Archives of Industrial Hygiene and Occupational Medicine, successor to the Journal of Industrial Hygiene in which the preliminary report of the asbestosis experiments was published in 1931.

It was also mentioned that the Editor had been told of the urgency and had been asked to publish the paper as soon as he could.

I am asking Dr. Verne to send to you seven copies—one for your own record and the others for the other interested members of the C. E. M. A.

I am also asking him to send one each to Sam Smith and C. E. Fisher.
