Large central power station. High steam line and feeder equipment insulated with K&M Hy-Temp and "Featherweight" 85% Magnesia, in combination.

Save heat-Save dollars with K&M high-temperature insulations

For applications up to 1000°F., the combination to keep in mind is that of K&M Hy-Temp Insulation and "Featherweight" 85% Magnesin.

Two separate layers of insulation with vertical and horizontal staggered joints eliminate heat loss which occurs when expansion of hot piping and equipment causes joints to open in single layer installations. K&M Hy-Temp Insulation (diatomaceous silica), effective up to 1000°F. is applied directly to the

hot surfaces and "Featherweight" 85% Magnesin Insulation (85% basic carbonate of Magnesia and asbestos fiber), effective up to 600°F. forms the second layer.

This effective K&M combination will last the life of the equipment it serves — will withstand moisture, vibration, alternate heating and cooling, wetting and drying. Both materials are supplied in all appropriate forms and thicknesses.

Your K&M distributor is an experienced applicator who will gladly give you more information about these heat-saving, money-saving K&M insulations. Or write directly to us.
