Cincinnati, Ohio.

Spray Residue Problem

Dear Dr. Kehoe:

Recalling our correspondence some years ago regarding my paper on the above subject which was published in the Jo. Franklin Institute, I am wondering whether you have published any data or have any bulletins available on the more recent developments especially in view of the action of the U.S. Dept. of Agri. on Sept 18th. in raising the lead tolerance to .025 grain per pound.

I am preparing a monograph regarding this subject for a leading reference work, and, knowing of your own researches regarding it will be very grateful for any data which you may have available of which I might make use.

Thanking you in anticipation for any courtesy which you may extend and awaiting your esteemed reply, I am

Cordially yours

HOWARD W. AMBRUSTER
