84 Sheet
Your letter March 12

As we indicated to you by telephone today, the first attempts by Wankagan to make 84 sheet, using the Australian blue fiber submitted to, then by this Laboratory, were unsuccessful due to the cured sheets developing blisters.

By telephone, Wankagan advised yesterday that a second attempt to manufacture this same 84 sheet stock was currently under way and that the sheets were being given a thorough oven drying prior to the press-curing operation. As of yesterday, Wankagan was ready to press-cure these experimental sheets; at that time, however, they had no information on the relative tendency of this stock to blister. We cannot, therefore, advise now concerning the success of this latest semi-production run, but will keep you posted as soon as Wankagan informs us regarding the outcome of this latest PE run on experimental 84 sheet.
