Our Industrial Hygiene laboratory at Stamford has received its accreditation from the American Industrial Hygiene Association. This means that our lab is one of seventy-five in the country whose results have attained the highest level of professional and legal recognition for all types of industrial hygiene analyses.

The benefits of having employee exposure results determined in this laboratory relate not only to good professional practices, but to the legal advantage of having results from a lab recognized as expert in its area of practice.

I strongly recommend that your plant managers use this service to ensure that our business functions are properly protected in future litigations, workers compensation cases, and other foreseeable actions.
