

ACME INDUSTRIES, INC.

JACKSON, MICHIGAN, U. S. A.

Continuously serving the air conditioning and refrigeration industry since 1919

34 years
experience stands
behind these
ACME products

Since 1919 Acme has been building units to serve the air conditioning and refrigeration field. They have experimented with thousands of models and installations. On-the-job service has always been the basing point for any Acme design changes. Today, Acme has a complete line of commercial refrigeration and air conditioning equipment—the end result of 34 years effort. You gain all this experience for yourself and your customer simply by specifying Acme on your installations.

ACME DRY-EX WATER
CHILLERS

For cooling water, brines, and other fluids by direct expansion of the refrigerant. Capacities from 5 to 260 tons.

FREON and AMMONIA
CONDENSERS

The standard of the industry. Enough production combinations to assure you of the most efficient operation available. Capacities from $\frac{1}{2}$ to 700 tons.

Write for catalogs and more information on any ACME product.

THE FLOW-COLD LINE

The Flow-Cold is a factory assembled and tested packaged liquid chiller designed for use in industrial process temperature control and air conditioning. Used as a heat pump and installed with the Flow-Temp Remote Room Conditioner it provides both heating and cooling.

EVAPORATIVE CONDENSERS and COOLING TOWERS

Solid, sturdy, dependable. All fabricated steel parts are hot-dip galvanized after fabrication assuring long life. Prime surface coils or specially designed Acme packs for Freon or Ammonia installation. Capacities from 4 to 130 tons.

HEAT EXCHANGERS, LIQUID RECEIVERS, OIL SEPARATORS

Freon suction and liquid line heat exchangers with capacities from 3 to 200 tons; more than 70 standard sizes of liquid receivers for Freon, Ammonia, or other refrigerants; and a complete line of Freon or Ammonia Oil Separators for $\frac{1}{4}$ to 100 ton systems.

AEROFIN CORPORATION

AEROFIN

Standardized Light-weight Heat Exchange Surface

There is a factory-trained AeroFin application and service engineer located near you to give you prompt service. Write, wire or phone the factory.

AeroFin is the modern Standardized Light-Weight Encased Fan System Heating and Cooling Surface originated by Fan Engineers to meet the present and future requirements of this highly specialized field. All Standard AEROFIN Units are furnished as completely encased Units, ready for pipe and duct connections. The patented casings are built of pressed steel and are exceptionally strong and rigid, protecting the Unit from all the strains of pipe connections and expansion or contraction in service. The casings are flanged on both faces, top and bottom, and template punched for bolting together adjacent Units, or for duct connection.

Fig. 1

AeroFin Non-freeze heater (Fig. 1) is non-freeze, non-stratifying spiral fin coil built into casing for air conditioning

units or for installing in ducts. May be installed either horizontally or vertically. Used on any two-pipe steam system for preheating or reheating. Modulating control on preheaters.

Available in 13 lengths and 3 widths, from net face area of 2.76 sq ft to 26.28 sq ft.

Fig. 2

Flexitube AeroFin (Fig. 2) is distinguished from all other developments by its off-set tubes, so arranged as to absorb all expansion and contraction strains.

Headers—Steel.

Tubing— $\frac{3}{8}$ in. O.D. copper, admiralty or aluminum.

Joints—Where admiralty or copper tubes are used together with bronze or steel headers tubes are brazed to headers. Where both aluminum tubes and headers are used tubing is welded to headers.

Casings—Copper, aluminum or galvanized iron.

Design—Constructed with headers on opposite ends making possible installation of units with tubes horizontal or vertical.
