MR. PURCELL: Everyone done with their -- this is the third time, at least, that Mr. Drislane has been so cautioned. I think he well understands the admonition.

Can we proceed?

MR. LELIEVRE: 11:28 a.m., we are now back on the record. Please commence.

BY MR. PURCELL:

Q I have just directed your attention to Exhibit EE again. You read that to mean, do you not, that Mr. Weaver appreciated that chrysotile caused mesothelioma as of 1973; correct?

MR. FRIESTEDT: Objection to form.

A Mr. Weaver believed, yes.

Q Okay. Can you point to me any document anywhere that indicates anyone on the Asbestos Study Committee of the FMSI ever believed otherwise?

MR. FRIESTEDT: Objection to form.

A No.

Q Are there any FMSI documents that you are aware of that indicate that it was ever more than just a hope of members that chrysotile might not cause or be associated with mesothelioma?

MR. MENDRZYCKI: Objection.
