Chicago, Illinois 60612

Dear Dr. Carnow: and have been a subscriber of yours for the

Your article, "Health Hazards in the Arts and Crafts", has apparently been published or referred to in the March 1975 issue of Ceramic Scope. In this publication, under the subheading, "Toxic substances in ceramics", it points out that you have identified and/or included plaster as being potentially toxic. This article is being noted and questioned by several of our customers who manufacture plaster molds for use in the Ceramic Industry. We can find no information to substantiate your claim, and since it is affecting the continued sale of this product, I would appreciate your advising me as to the nature of toxicity, and how it was determined.

Thank you.

Very truly yours,

Thomas L. Ravins
Product Manager
Industrial Sales
