TML--Foreign Medical Clearances

August 15, 1960

This will confirm my recent telephone report to you concerning the present status in Australia, New Zealand and South Africa. In New Zealand, Dr. Kehoe advises that discussions with Dr. Kennedy, Director of Public Hygiene, located at Wellington, have been conducted and this area is now clear. Dr. Kennedy is the person to be notified by anyone planning to put gasoline containing TML on the market.

In Australia, discussions have been held with the central government. While there is no indication of any objection or problem, it is indicated that health authorities in the provinces are to be contacted and this is under-way. If any refiner wishes to notify a local contact in Australia, it should do so to Dr. Keith D. Fairley, 421 St. Kilda Road, Melbourne S.C. 2, Victoria.

In South Africa, Dr. Drummond has initiated discussions with the health authorities, but has not as yet received any answer.
