SUBJECT: Midas Packaging I.D. - Asbestos-Free

This memo will confirm our phone conversation today regarding the need to define unique identification for asbestos-free cartons for Midas International.

We, in Marietta, have discussed the issue this week with Midas and are currently reviewing the same with Canparts and Rayloc. The point is this; we need to establish a standard marking that is uniform to all suppliers and addresses current inventories of cartons at all locations. Secondly, we must submit our recommendations to Midas for approval before we institute a change so their warehouses can handle the changeover.

We will work as quickly as we possibly can to resolve this issue and let you know.
