USG ASBESTOS CEMENT SIDING

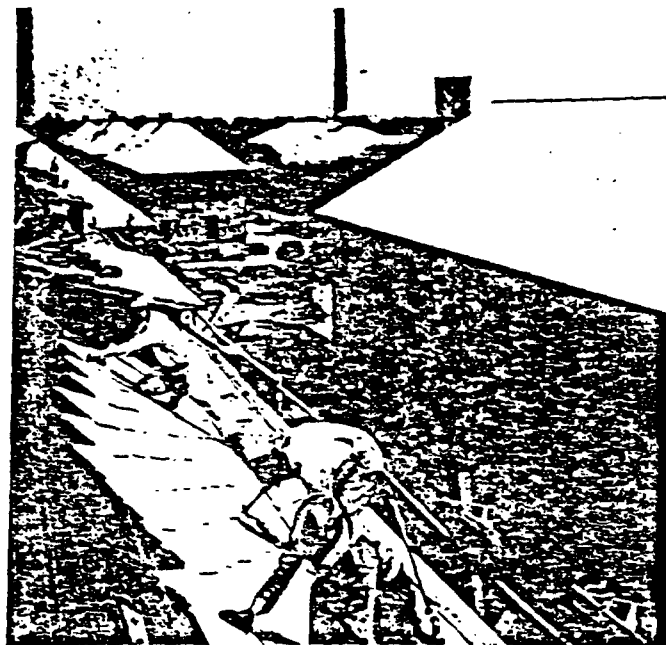

DESCRIPTION

USG Asbestos Cement Siding.

offer fire protection, permanence, beauty at an unusually low per year cost. They are made in a variety of colors and designs to provide the architect full freedom of selection and enable him to specify exterior walls that will remain attractive throughout the years. Outstanding features of USG Asbestos Cement Siding are the trueness and uniformity of colors, the variation in face textures, and the length of the shingle units—3 in. longer than any other asbestos cement shingle now available. This means 11% fewer joints, tighter, more wind resistant walls.
