Elimination - Leaded Zinc
Codes 68-22-00, 68-29-00

Supplementing Procurement Information Item No. 71-192, the target date for the elimination of Leaded Zinc Oxides, codes 68-22-00 and 68-29-00 has been changed to June 30th.

All Raw Material Stockkeepers have been contacted, and each factory should by now have placed requisitions on Coffeyville for their requirements of Leaded Zinc through June 30th.

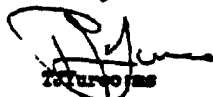

This program of eliminating Leaded Zinc Oxide from exterior house paints will require close coordination and communications with Production Planning, Technical Service (Local Pigment Coordinator) and Stockkeepers. This is important to prevent possible stock-outs or overstock.

Coffeyville has stepped up production on Leaded Zinc in order to complete shipment by May 7th of all open orders on hand April 28th. They have no further production schedule after this date. If there are future requirements, they will produce only on the basis of an economical batch size of 50 tons. If you foresee any need for additional material or the possibility of having an overstock, please keep me fully advised so that we can consider possible transfer.

The Leaded Zinc Oxide will be replaced by Oxide 30P, code 67-35-60. The requirements on the Oxide 30P will be approximately 70% of your Leaded Zinc Oxide past usage. This is not a pound-for-pound replacement.

Raw Material Stockkeepers should place requisitions on Coffeyville no later than May 11th to give you a 3/4 to one month stock as of July 1, 1971 on the Oxide 30P, code 67-35-60. A ship date should be specified.

We also want to remind the Raw Material Stockkeeper to review the other codes listed in Item No. 71-192, which will decrease in usage to adjust inventories accordingly.
