Kevin Ma from the St. Albert Gazette here, a newspaper in Alberta, Canada. I'm looking for the greenhouse gas emission factors (metric tons CO₂e per short ton, although per metric ton preferred) for various forms of waste so I can compare the GHG benefits of recycling vs source reduction, landfill, combustion, etc. I got the attached information from the WARM model a few years back and am looking for the up to date numbers. Where can I find them? (I can find most of the stuff but wasn't sure what numbers to use for composting.

I can be reached here or at [Ex. 6] Deadline end of Monday or so.

Thanks
Kevin
