

ST. PAUL'S Cathedral in London has a heavy lead roof. This roof is a monument to lead craftsmanship and is everlasting.

Everlasting

For centuries the lead roof of old St. Paul's Cathedral, in London, has resisted the destructive elements of time.

Lead was selected as the covering for this magnificent structure because from earliest history it has proven itself the everlasting metal. And so it is with lead pipe. It will outlast the building in which it is installed.
