TO : Mr. G. R. Buchanan  
Monsanto Company  
St. Louis, Mo.

Based on recommendation for action described in Final Report on Areclor, we are airfreighting you two sample bottles of Kanegafuchi's chlorinated biphenyl (Kanechlor 300 ----- correspondent to Areclor 1242) obtained from Shizuki Electric.

As for Kanechlor sample from Nichicon Capacitor, they don't want to offer it to us, saying that they must consult with Kanegafuchi because it has been developed jointly by Kanegafuchi and Nichicon for a long time. So, we think we had better not push Nichicon any further at this stage.

In regard to Kanechlor sample from Matsushita Electric, it is recalled that one drum (125kg) of Kanechlor 300 was sent to Mr. H.J. Horner, W. G. Krumrich Plant, on December 7, 1966 through MJL, and therefore, we would think that you can use it for testing purpose.

We would appreciate your analyzing and testing these Kanechlor samples, and informing us of the results of evaluation tests.

If we can be of any additional assistance, please let us know.

Many thanks for your assistance.
