Mr. Frank P. Kelly
604 Fort Worth Club
Fort Worth, Texas 76102

Dear Mr. Kelly:

Your letter of 3-2-64 to Mr. E. J. O'Leary and the attached sketch shows a smoker design which we feel could incorporate some of our products.

I am enclosing samples and data sheets covering Ruberoid asbestos cement Stonewall Board and Ruberoid Calsilite insulation. It is suggested that the smoker be built using Stonewall Board as the sides, top and bottom supported in a lightweight, metal frame (i.e., aluminum). The Calsilite insulation would be used around the heat source of the smoker to reduce the heat transfer at the point of high temperature (700°F.).

It may be necessary to use Calsilite in other areas of the smoker in conjunction with the Stonewall Board where added insulation value is needed. Calsilite is an excellent insulating material while Stonewall Board is more functional and would be a practical product in use as the outside surface of the smoker. It would also meet the needs you outlined since it is lightweight and fireproof.

I think you will agree, after seeing the sample, that Stonewall Board will not be practical used alone but will be, if supported by a metal frame at the edges.

If you need additional samples or further data, please let me know and we will be happy to provide same. I hope that we can be of service and assure you that we are eager to help you in any way possible.

Very truly yours,

THE RUBEROID CO.

Subject INSULATED SMOKER - HOME USE

Attached is a copy of a letter Mr. O'Leary received from Frank P. Kelly outlining his idea for the construction of an insulated smoker for use inside of the home.

Please look over this proposal and let me know if you think it has merit and would be of interest to us.
