Thank you for your recent letter - I
your views on B.A.L. in children with lead
your views regarding ventricular drainage.

I am now far from the Ethyl group and is no time for outside activities whilst my is growing up. I have quite a good set-up laboratories. My staff is good and keen. hemoglobinuria at present and have had some disorders of Ca and P metabolism. We have little to say - that is for the future I hope.

We see odd patients with Pb intoxic. trouble isolating "diagnostic" amounts of Pb laboratory does not handle this but, on acc I usually get to see the cases. I am unf plumbism with marked C.V. changes and am su with such a person. Recently I was asked who developed, over 12 months, an insidious a c.s.f. protein of 250-300 mg %. Only j jaw! C.N. intact. He has a blood pressure central cyanosis, papilledema and retinal n lead in the urine. Put up as Pb ?adminis this story does not seem right to me but ma

I wish you the compliments of the season
bring you out here.

You:

C.R
