The Ohio State University
1735 Neil Avenue
Columbus, Ohio 43210

Dear Dr. Greenwald:

In response to your letter dated June 21, I have enclosed a sample request form. Upon receipt of the completed form I will make arrangements to have the samples you request forwarded to you.

On occasion Monsanto has supported outside research, particularly for studies uniquely designed to support Monsanto programs. As you know, many laboratories have studied, and continue to study, the effects of the various polychlorinated biphenyl mixtures on many types of fish. The high interest which is apparent in the studies has resulted in many published reports with many more expected in the near future. In many cases the studies are redundant with no new information being contributed to our understanding of the effect of polychlorinated biphenyls on aquatic life. It does not appear to us that further studies with fish can be justified at this time.

Sincerely,

W. B. Papageorge
