A Reminder To Our Customers About.....

VINYL CHLORIDE MONITORING

It has been a while since we last heard from you and we would like to remind you that you are still obligated under OSHA regulations to monitor your facility periodically for vinyl chloride.

Since G.A.S. Corp. has performed vinyl chloride analyses for you in the past, we feel it is our obligation to remind you of existing regulations.

The current OSHA concentration limit allowed is a TWA (eight hour weighted average) of 1 ppm and an ACTION LEVEL of 0.5 ppm.

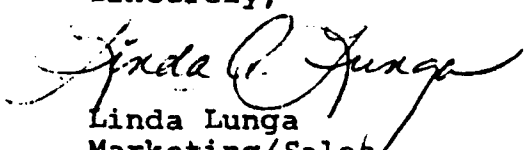

G.A.S. is equipped to perform on-site and/or vinyl chloride analyses in our laboratory. Rental equipment is available. Other related analytical services include residual VC in foods and packaging materials, trace VC in waste and drinking water and other special analyses.

In February of this year, we became an A.I.H.A. (American Industrial Hygiene Association) accredited laboratory. Our certification includes vinyl chloride analyses with plant monitoring capabilities. We also participate in the NIOSH round robin program; NIOSH being the analytical branch of OSHA.

Contact either Lou Molinini or myself to arrange for vinyl chloride testing.

We trust that this information is useful to you and look forward to hearing from you.

Sincerely,

Linda Lunga
Marketing/Sales
