SUBJECT: Vinyl Chloride - MCA Studies

Attached is a memorandum by John Butala reviewing the January 12th meeting of the MCA's Technical Panel on Vinyl Chloride Research. John is a toxicologist in Dr. MacFarland's group and I asked him to attend the meeting for me because of a conflict.

As of this time, GOCEM is not participating in the University of Louisville's research program. Note that an attempt will be made to enlarge the participation by approaching the MCA Board. This makes sense since these studies go far beyond the vinyl chloride interests. In my opinion the direction of this study should be under a new Task Force and not the vinyl chloride group.

Roy L. Gibson, M.D.
