

1 A Yes.

2 Q On page 2 of this document, Mr. Weaver reports,
3 quote, The most important item here is the incrimination of
4 all, underlined, major types of asbestos as causal agents for
5 carcinoma, particularly mesothelioma. Most of the other
6 items only confirm and substantiate previous conclusions.
7 Since most -- most of us use substantial amounts of
8 chrysotile asbestos in our formulations, association of this
9 material with mesothelioma and other types of cancer is of
10 serious concern.

11 If I could direct your attention to what I just
12 read, did I read that correctly?

13 MR. FRIESTEDT: Objection, objection to form.

14 A Where are you? Point out where you are.

15 Q (Indicating.)

16 A Yes. That's -- what you read is correct. What
17 you read is what Ike wrote.

18 Q Later in the presentation, Mr. Weaver as chairman
19 of the FMSI Asbestos Study Committee reports that, "Large
20 volume replacement users present major potential hazards and
21 even small job shops can needlessly expose people to high
22 fiber concentrations if operations are performed without
23 controls."
