whether or not the Owens-Illinois people worked closely with the Owens-Corning people to advise them about the Kaylo product?

A I am sure they did.

Q Let me show you a document from the Owens-Corning depository dated February 7, 1952 which concerns those same animal studies.

A This guy is in Saranac?

Q Yes, Dr. Vorwald. This has Bates number 015011347. And this says, "Herewith is the final report of our studies concerning the capacity of inhaled Kaylo dust to injure the lung."

The second paragraph says, "The results of the investigations with animals show that Kaylo is capable of producing peribronchiolar fibrosis typical of asbestosis."

Now, am I correct that no one ever shared this letter with you?

A I don't remember it, no. I don't remember seeing it.

Q Do you agree that if you had seen this
