Economic Impact of the Proposed Asbestos Ban

Attached for inclusion in the Commission's briefing package is our report on the potential economic effects of the ban of patching compounds and artificial emberizing material containing asbestos.

The conclusions reached in the report reflect the latest changes (as of Nov. 14) in the wording and in the technical and legal interpretations of the draft Federal Register notice included in the briefing package. We will be prepared to discuss at the Commission briefing our latest information, including any additional data we may receive which have not been included in the impact report.
