Fiber Blends
Lower Point Value

Point values of M 623 and M 626 blends are to be adjusted downward because of a change in quality of M 100 fiber. Please adjust your fiber furnishes on April 22nd to the new quantities using the corrected blend point values. Revised manufacturing specifications will be issued shortly.

The new average point value for M 100 will be 60, the same as before the increase effective 1-7-63. This will result in a lower price per ton of fiber to be paid to the Fiber Division.

Point values by fibers and blends are as follows:

Fiber Point Values

Blue - 80
4T30 - 70
4D, 4H - 60
M-100 - 60

Blend Point Values

	<u>with 4D, 4H</u>	<u>with 4T30</u>
M 623 (Tube mandrels)	60	67
M 626 (Swing mandrels)	64	69

The fiber you have in stock now can be used at the new point values starting with April 22nd.
