Mr. Bob Bowman
Warner-Jenkinson
P. O. Box 14538
St. Louis, MO 63178-4538

Dear Bob:

I spoke to our technical laboratory regarding the equilibrium vapor concentration for ALFOL 6 Alcohol. It was not clear to them how you would want this figure calculated. However, based on a vapor pressure of 1.0mm of mercury at 25°C, and using the ideal gas laws, the calculated value would be approximately 0.5 weight per cent in air or approximately 1320 ppm.

Sincerely,

Thomas G. Grumbles, C.I.H.
Director, Industrial Hygiene
