Your three samples were analyzed for asbestos fibers by the Midland Division Microscopy Laboratory using the standard phase contrast microscopy method at 450X magnification. The results indicate very low concentrations of asbestos fibers in the areas where the samples were taken.

<u>Sample</u>	<u>Air Volume Sampled (ml)</u>	<u>Estimated Fibers/Sample</u>	<u>Asbestos Conc. (fibers/ml)</u>
1	100,000	1235	0.012
2	225,000	3705	0.016
3	300,000	4940	0.016
