We will be starting the Annual Inspection of chain falls April 11, 1977. In order to do this we will need to get these back into the toolroom as soon as possible.

Let's all make a good personal effort to see that all chain falls in the areas get delivered. Be sure to check storage cabinets, tool cribs, area boxes, etc.

The stationary hoists (such as overhead cranes and heavy mono-rail crane hoists) will be tested in place later. Small semi-stationary hoists must be sent to the toolroom.

The extent of service on stationary hoists will be only to test, and only if the installation permits testing. Servicing of these hoists; such as, lubrication, inspection, adjustments, etc. should be handled entirely by the field.

Chain falls will be tested on a yearly basis. Color code this year will be a RED DOT on side of hoist.

Should there be any questions, please contact me.
