TOXICITY STATEMENT
FOR THERMINOL FR-1

J.T. GARRETT
JGARR

Jack, attached is our most recent statement regarding toxicity of Therminol FR-1 and Therminol FR-2. We would like your ideas regarding any changes to this statement in view of the PCB situation over the last year or so. Also I think we should drop the mention of Therminol FR-2 since it is no longer on the market. Should we include a statement regarding FR-Lo Temp and FR-O?

Can or should we incorporate the statement from FDA on limitations in food and milk products.

We would appreciate your up-to-date comments as we would like to discuss this with our people at our sales meeting during the week of April 25.
