J. Catterall

On March 31, 1976, I received the report from E. Bober concerning the air samples taken during test cuts on Wednesday, February 25th. The results indicate that the levels measured were in excess of allowed concentration under present standards. In view of this information, we have cleaned the machine and have terminated cutting of asbestos materials in the raw materials stock room.

T. J. Sweeney
Manager, Machining Services
