

Any painter can learn
all about

SPEED MIXING

(From Keg to Brush in a Jiffy)

READ how easy it is
to spend LESS time in
the shop and MORE
time on the ladder.

"Speed Mixing" is as simple as
A. B. C. Painters now find it
easy to save time mixing high-
grade, long-wearing white lead
paint. "Speed Mixing" is easy with
Dutch Boy Soft Paste White Lead.

This pure white lead in soft
paste form is ready for thinning
and tinting when it comes from
the keg. It requires no breaking
up. You can reduce 100 pounds
of Soft Paste White Lead to paint
in just a few minutes—at the rate
of a gallon of paint per minute.

Dutch Boy Soft Paste
White Lead is pure
white lead and pure

linseed oil...nothing
else. It has the same surface-
protecting quali-
ties that have al-
ways distinguished Dutch Boy.
It makes paint that spreads
smoothly, tints evenly, protects
just as thoroughly and it saves
mixing time.

Save time and labor by
"Speed-Mixing" white-lead paint
for your next job. Make up
your mind to use this quick-
mixing white lead—Dutch Boy
in soft paste form.

Be sure it's **DUTCH BOY**

Dutch Boy in Soft Paste form
was developed to save you
time and labor for "Speed
Mixing". It's a different in
quality from the heavy paste
used by painters for years. If
you still prefer heavy paste—
use it. But be sure it's Dutch
Boy—the white lead used by
8 out of every 10 painters.
