GP-421

Mr. Abbey has stated by his memo of May 1st that enough raw material for 100 ton of the subject plaster is to be stocked at each of the above plants. We have discussed this with Mr. Grieve and he is agreeable to the program.

I have accordingly ordered the following materials in quantities that will be approximately enough for the 100 ton of finished product:

1. ASBESTOS has been ordered for all of the plants, except Acme, texas. We have submitted a sample to the Laboratory of Johns-Manville Asbestos and if this is approved, we will order a mixed carload of this material and 7RF-1 for the Acme plant.

2. BENTONITE has been ordered for all plants, except Sigurd. Sigurd now has a sample of clay at the Laboratory for approval from a local source. If this sample is approved, Sigurd may order this direct.

3. ULTRA WET DS has been ordered for all of the plants, except Acme, Texas who already has a supply on hand.

4. TETRA SODIUM PYRO PHOSPHATE has been ordered for all of the plants.

No material was ordered for Fort Dodge at this time because this was the plant that made the trial run and consequently they have the materials on hand.

The multiwall bags for shipment of this plaster should be ordered with a carload order of bags as instructed in my bulletin of April 29th. Several of the plants have already ordered these bags.
