The SHAC
Central Files

Recent incidents indicate the need for a careful study of the plant standards/procedures/practices related to plant utility stations hoses, couplings and their use. Therefore, the SHAC has appointed the addressees as a committee, with Mr. Stockwell as Chairman, whose charter is:

1. Develop a standard design for utility stations.
2. Develop a standard means for attaching utility hoses to fittings (crows feet, N₂ couplings, steam couplings etc).
3. Develop a standard for securing/locking crows feet couplings in the connected position.

SHAC requests feedback concerning targeted completion date.

The undersigned SHAC member will be your contact.

When you have completed your standards please contact me and we will arrange for your presentation to SHAC.
