alternates were primarily salespeople. I don't know whether I sent it to them. It would depend on what it said down below. I say copies to Asbestos Study Committee, delegates and alternates, if that's the case, that's where I sent them.

Q Yes, sir. And those OSHA regulations that you described, the various levels of allowable exposure --

A Yes.

Q -- they were called permissible exposure limits or PELs?

A Yes.

Q Do you recall OSHA saying quite clearly in those regulations that significant risk exists below that level?

A I don't recall this. I -- but I'm saying I am sure if you read it someplace and it is in my papers, that that was so, but I don't recall it right here.

Q Now with respect to Chrysotile asbestos in 1973, Mr. Weaver indicated that not only could all commercial types of asbestos, including Chrysotile cause cancer, but that it could cause
