HEALTH SURVEY AT BERLIN PLANT

PLAINTIFF'S EXHIBIT
44
Dec 3/17/73

In answer to your correspondence of November 18, 1965 asking if we have ever had an investigation of the health of our Berlin employees, comparable to that made by Dr. Wright in Newark, the answer is "no". We have had periodic (annual) chest x-rays taken of about 180 of our 230 hourly employees and these are sent to the University of Michigan where they are interpreted and analyzed.

I have asked our Berlin plant to provide us with data about our production employees and this information will include such things as length of employment, types of jobs, probable exposure, etc.

Obviously we do not have anything in the way of a formal report, but I am sure that we could obtain from the University of Michigan information concerning the x-ray interpretations.

It is my understanding that no lung disease had been detected among our Berlin workers up to this time.

As soon as we receive additional information from Berlin, I will let you know.

F. E. Edwards
