IN REPLY PLEASE REFER TO

Dr. Robt. A. Kehoe,
Kettering Laboratory of Applied Physiology,
College of Medicine,
Eden Avenue,
Cincinnati, Ohio

Dear Dr. Kehoe:

Attached is a copy of a letter we have received from our Mr. MacEwen. While considerable pertinent data is missing - such as the quantity of gasoline and actual use of water - we would appreciate your comments on the case.

Yours very truly,

J. N. FITZGERALD

ETHYL GASOLINE CORPORATION

167 Thornton Avenue,
London, Ontario,
September 21st 1937

Mr. J. N. FitzGerald.

Dear Fitz:

Mr. Mitchell of the Shell Oil Co. called me up
with the following problem, --

One of their customers has a well which has
become contaminated with leaded gasoline, which has of course
risen to the top of the water. Is there any likelihood of the
water being affected by the lead, that is will the lead be absorbed
to any extent by the water.

They propose to draw off the water from beneath
the gasoline level, and wondered if there would be any danger from
the lead. My answer was that there would not be, but I would like
to have this confirmed.

Yours very truly,

"P. B. MacEwen"
