ALUMNI HONOR PROFESSOR PHILIP DRINKER

Memories of Professor Philip Drinker's 40 years at Harvard — exciting moments, warm and humorous incidents and the excellence of his teaching and research — were publicly recalled on April 10 by some of the men who know him best. The occasion was a dinner in his honor, attended by 75 Harvard industrial hygiene alumni and wives, at the Sheraton-Cadillac Hotel in Detroit during the annual meeting of the American Industrial Hygiene Association. Professor Drinker is retiring as Professor and Head of the Department of Industrial Hygiene and becomes *emeritus* September 1.

Five speakers, each of whom has shared a period of Professor Drinker's professional career, took the microphone in turn. Their reminiscences touched on his student days, his early work at Harvard with his late brother, Dr. Cecil K. Drinker, his pioneering investigations and important contributions to industrial health and safety, his friendly guidance of a host of students and colleagues, his pipe and dogs and fishing and devotion to his family. The speakers were J. William Fehnel, an industrial hygiene consultant formerly with The Metropolitan Life Insurance Company, a classmate of Professor Drinker at Lehigh University and a research collaborator at Harvard in the 1920's; Theodore F. Hatch, S.M. 1925, Professor of Industrial Health Engineering, University of Pittsburgh School of Public Health, who served in the basement of 55 Shattuck Street as a member of the Industrial Hygiene Department from 1926 to 1936; Willis G. Hazard, A.M. 1930, Owens-Illinois Glass Company, President of the American Industrial Hygiene Association, and an associate of Professor Drinker in 1932-34; Jack C. Radcliffe, S.M. 1939, Ford Motor Company, retiring President of the AIHA for 1961-62 and a former student of industrial hygiene at Harvard, and Leslie Silverman, S.D. 1943, Professor of Engineering in Environmental Hygiene, Harvard School of Public Health, who did graduate work under Professor Drinker in 1937-39 and has been a member of his Department for 22 years.

Professor Hatch, who presided, recalled in vivid detail the exact moment when Professor Drinker conceived the idea of the "iron lung," the testing of the first crude apparatus and the high satisfaction of the ultimate respirator's success in treating polio patients.

Professor Drinker was presented with a set of wood-working tools for his enjoyment in retirement at Fitzwilliam, N. H.
