THERE IS A CORE OF NYLON THREAD IN EVERY STRAND OF R/M FINE TAPE

The Nylon core in both the warp and filling yarns of R/M Fine Tapes provides superior tensile for machine and hand wrapping. These tapes also have greater elasticity. This produces a snug fit around the sharp bends in motor coils. R/M Electrical Insulating Tapes have been lab tested and service proved. They are woven .010", .015", .020" and .025" thick.

and development is only 1 per cent of the gross national product. This is a large amount compared with the 0.3 per cent spent 25 years ago, but it is still far too low to produce a healthy annual increase in the prosperity of industry and of the country.

If any reader, or his company, is uncertain how to invest in this profitable enterprise, The American Society for Testing Materials, (1916 Race Street, Phila. 3, Pa.) has a 30-year-old organization that can help him. One of the major objectives of the Administrative Committee on Research is the encouragement and stimulation of research to increase our knowledge of engineering materials, and the committee has a splendid list of 67 important unsolved problems in materials suggested by the ASTM technical committees, all of which give ample promise of paying substantial dividends if they are solved.
